

TECHNICAL UNIVERSITY OF MOMBASA

Faculty of Engineering and Technology

Department of Electrical and Electronic engineering

UNIVERSITY EXAMINATION:

Diploma in Electrical Power Engineering (DEPE 5)

ELECTRICAL MACHINES II EEP 2301

END OF SEMESTER EXAMINATION

SERIES: DEC 2016

TIME: 2 HOURS

Instructions to Candidates You should have the following for this examination *-Answer Booklet, examination pass and student ID* This paper consists of five Questions;. Attempt any THREE Questions. Do not write on the question paper.

Question ONE

- (a) (i) State THREE conditions to be satisfied before a synchronous motor is connected to the supply.
 - (ii) State the equipment that indicates compliance with l(a)(i) above.

(6marks)

- (b) Explain the effect of the following an synchronous motor without changing the load:
 - (i) Over exciting
 - (ii) Under exciting
- (11 marks) (12 marks) (03 marks)

Question TWO

- (a) State the merits of using per unit values in transformer analysis. (4 marks)
- (b) A 30 transmission line operates at 66kV. It is connected through a 1000KVA transformer having 5% reactance to a generating station busbar. The generator is of 2500KVA with 10% reactance. Determine the full load current delivered.
 (8 marks)
- (c) A 500V 10KVA single phase generator has an open circuit voltage of 500V. When the load current is 25A at a certain power factor the terminal voltage falls to 480V.

Determine:

- (i) The output voltage
- (ii) Output current
- (iii) Voltage regulation

(8 marks)

Questtion THREE

- (a) (i) Define the per unit (p.u.) system.
 - (ii) State FOUR reasons justifying the per unit system in electrical system analysis.

(6 marks) (4 marks)

- (b) Explain why transformers are rated in KVA.
- (c) A generator rated 1000VA and 200V has internal impedance of j10Ω. The generator impedance is stamped on the name plate as j25% together with the other ratings. The generator is short circuited at its terminals.
 Determine:

Determine:

- (i) The short circuit current
- (ii) The short circuit power delivered by the generator in:
- (iii) Per unit
- (iv) Percentage (%)
- (v) Actual units

(10 marks)

Question FOUR

 (b) Explain the methods of starting synchronous machines. (c) Explain the effect of the following on a running synchronous motor: (ii) Increasing load (iii) Decreasing the load (d) Explain 'pull out Torque' for a synchronous machine. (d) Explain 'pull out Torque' for a synchronous machine. (i) State TWO applications of the following: (i) Stepper motor (ii) Hysteresis motor 	(6 marks)
 (c) Explain the methods of starting synchronous machines. (c) Explain the effect of the following on a running synchronous motor: (ii) Increasing load (iii) Decreasing the load (d) Explain 'pull out Torque' for a synchronous machine. (d) Explain 'pull out Torque' for a synchronous machine. (i) State TWO applications of the following: (i) Stepper motor (ii) Hysteresis motor 	(6 marks)
 (c) Explain the effect of the following on a running synchronous motor: (ii) Increasing load (iii) Decreasing the load (d) Explain 'pull out Torque' for a synchronous machine. (d) Explain 'pull out Torque' for a synchronous machine. (a) State TWO applications of the following: (i) Stepper motor (ii) Hysteresis motor 	(6 marks)
 (ii) Increasing load (iii) Decreasing the load (d) Explain 'pull out Torque' for a synchronous machine. (d) Explain 'pull out Torque' for a synchronous machine. (i) Explain 'pull out Torque' for a synchronous machine. (a) State TWO applications of the following: (i) Stepper motor (ii) Hysteresis motor 	(6 marks)
 (iii) Decreasing the load (d) Explain 'pull out Torque' for a synchronous machine. <u>Question FIVE</u> (a) State TWO applications of the following: (i) Stepper motor (ii) Hysteresis motor 	(6 marks)
 (d) Explain 'pull out Torque' for a synchronous machine. <u>Question FIVE</u> (a) State TWO applications of the following: (i) Stepper motor (ii) Hysteresis motor 	(6 marks)
 (d) Explain 'pull out Torque' for a synchronous machine. <u>Question FIVE</u> (a) State TWO applications of the following: (i) Stepper motor (ii) Hysteresis motor 	(0
<u>Question FIVE</u> (a) State TWO applications of the following: (i) Stepper motor (ii) Hysteresis motor	(2 marks)
<u>Question FIVE</u> (a) State TWO applications of the following: (i) Stepper motor (ii) Hysteresis motor	
 (a) State TWO applications of the following: (i) Stepper motor (ii) Hysteresis motor 	
(i) Stepper motor(ii) Hysteresis motor	
(ii) Hysteresis motor	
	(4 marks)
(b) With reference to stepper motors explain:	· · · · ·
(i) Holding torque	
(ii) Step accuracy	
	(A marks)
(a) A standard meter has a standard of 2 Γ^{0} and a standard frequency of 2000	(4 IIIdi KS)
(c) A stepper motor has a step angle of 2.5° and a stepping frequency of 3600	pulses per
second. Determine:	

- (i) Resolution
- (ii) Number of steps required for the shaft to make 25 revolutions
- (iii) Shaft speed

(12 marks)
