

TECHNICAL UNIVERSITY OF MOMBASA

Faculty of Engineering and Technology

DEPARTMENT OF ELECTRICAL AND ELECTRONIC ENGINEERING

UNIVERSITY EXAMINATION FOR:

DIPLOMA IN ELECTRICAL ELECTRONICS ENGINEERING (DEEE 6)

ILLUMINATION ENGINEERING

EEP 2306

END OF SEMESTER EXAMINATION

SERIES: MAY 2016

TIME: 2 HOURS

Instructions to Candidates

You should have the following for this examination

-Answer Booklet, examination pass and student ID

This paper consists of **five** Questions;

Attempt any **THREE** Questions.

Do not write on the question paper.

PAPER ONE

QUESTION ONE

- a) State the units for the following terms associated with lighting.
- Luminous flux
 - Luminous efficiency
 - Luminous intensity
 - Solid angle
- (4 marks)
- b) State
- The advantages of coiled coil filament lamps over single coil lamps. (2 mark)
 - Two types of filaments which were used earlier than the metal filament. (2 marks)
- c)
- Define a Luminaire (2 marks)
 - State **THREE** names of gases used in discharge lamps. (3 marks)
- d) Distinguish between **INCANDESCENT** lamps and **DISCHARGE** lamps. (4 marks)
- e) Define utilization factor or coefficient of utilization as a ratio and state its purpose. (3marks)

QUESTION TWO

- a) State
- Four lamps which are commonly used for interior lighting today
 - Five factors which the lighting designer should consider when selecting lamps. (9 marks)
- b) Explain the term stroboscopic effect in discharge lamps and using the lead-lag connection of lamps, draw the circuit diagram, to show how it can be reduced. (5marks)
- c) Two lamps A and B of 300 candelas and 500 candelas respectively are situated 100 meters apart. The heights of A above the ground level is 15M and that of B is 30M, if a photometer is placed at the center of the line joining the two lamps on the ground, calculate the reading of the photometer. (6 marks)

QUESTION THREE

- a) Define
- Illumination
 - Brightness
 - Reflection factor
 - Diffusing lighting
- (8marks)
- b) State where the following lamps are mostly applied and why,
- Neon lamps
 - Low pressure sodium lamps
- (4 marks)
- c) Explain why the indirect lighting is most preferred to other lighting system in a professional design. (4 marks)
- d) Explain what is meant by an incident light. (4 marks)

QUESTION FOUR

- a) Define
- Coefficient of utilization
 - Depreciation factor
 - Waste high factor
 - Flicker
- (4 marks)
- b) State four application of flood lighting. (4 marks)

- c) A yard 30M long and 8M wide is to be illuminated to a level of 300lm/m². Assuming the average lumen output of a lamp is 40lm/w, the maintenance factor of 0.8 and a utilization factor of 0.5 Calculate the total lamp power and the number of lamps if 50W fluorescent lamps are used. **(12 marks)**

QUESTION FIVE

- a) State the requirements for a well designed lighting scheme. **(4 marks)**
- b) Draw :-
- i. A fluorescent lamp circuit, including a p.f. correction capacitor and explain how it works.
 - ii. A well labeled diagram of a metal halide lamp and explain how it works.
- c) A lamp having a luminous intensity of 720cd is fixed 6M above a working plane. Calculate the illumination.
- i. At point A vertically bellow the lamp
 - ii. At a point B, 6M from point A on the same horizontal plane. **(10 marks)**
