TECHNICAL UNIVERSITY OF MOMBASA
FACULTY OF APPLIED AND HEALTH SCIENCES
DEPARTMENT OF MATHEMATICS \& PHYSICS
UNIVERSITY EXAMINATION FOR:
DIPLOMA IN NAUTICAL SCIENCE
AMA 2213: MATHEMATICS 11
END OF SEMESTER EXAMINATION
SERIES:AUGUST2017
TIME:2HOURS
DATE:Pick DateSep2017

## Instructions to Candidates

You should have the following for this examination
-Answer Booklet, examination pass and student ID
This paper consists of FIVE questions. Attemptquestion ONE (Compulsory) and any other TWO questions.
Do not write on the question paper.

## Question ONE

a).Express the equations:
i). $x^{2}+y^{2}=3 y$ in polar form
(3marks)
ii). ). $r^{2}=5 \csc 2 \theta$ In Cartesian form
(3marks)
b).On commencing employment, a man is paid a salary of Ksh. 880,000 per annum, and receives an annual
increment of ksh. 3600 .
Determine his:
i). Salary in the eighth year
(3marks)
ii).Total earnings in the first 9 years.
b).Given that:

$$
f(x)=\frac{3 x-1}{2 x+1} \quad \text { find } \quad f^{-1}(1)
$$

(6marks)
c). Solve the equation $\sin 3 x+\sin x=0$ for values of x , where $-180^{\circ}<x<180^{\circ}$ (7 marks)
d). Differentiate using first principle $\quad y=3 x^{-2}+2 x$ marks)

## Question TWO

a). Sketch the region bounded by the curve. $y=x^{3}-5 x^{2}+4 x$ and the lines $x=$ 0 and $x=3$
and hence use integration to find the area of the region defined.
(12 marks)
b).The table shows the number of items and their corresponding costs:

| Number of items (x) | Cost per item(y) in ksh. |
| :--- | :--- |
| 2 | 48 |
| 4 | 54 |
| 8 | 68 |
| 5 | 75 |
| 10 | 88 |

Determine the product moment correlation coefficient between the two variables and comment on the results.
(8 marks).

## Question THREE

a).Obtain the value of k for which $(k+1),(k-5),(k-2) \ldots \ldots \ldots$ is a Geometric progression Hence find the sum of the first 12 terms.
(9 marks)
b).A plane flies due east and then due south in kilometers between London $\left(51.30^{0} \mathrm{~N}, 0.10^{0} \mathrm{~W}\right)$ and

Mecca $\left(21.26^{0} N, 39.49^{0} E\right)$.Determine the distance travelled.
Take the circumference of the earth to be 40074 km .
(11 marks)

## Question FOUR

a).Given that:
$8 \cos \theta+25 \sin \theta=R \cos (\theta-\alpha) \quad$ where $R>0$ and $\quad 0^{0} \leq \theta \leq 360^{\circ}$
i). Find the values of R and $\alpha$ marks)
ii). Solve the equation $8 \cos \theta+25 \sin \theta=2$ for $0^{0} \leq \theta \leq 360^{\circ}$ (6marks)
b).Expand $(5+x)^{\frac{1}{3}}$ up to the term $\mathrm{x}^{3}$ and hence evaluate $\sqrt[3]{5.1}$ to 5 decimal places. (10marks)

## Question FIVE

a).The parametric equation of an ellipse is given by: $x=7 \cos t, y=4 \sin t$ where t is the parameter. Show that the Cartesian form of this equation is: $\frac{x^{2}}{49}+\frac{y^{2}}{16}=1$ marks)
b) A mechanical system is subjected to three forces A, B and C in such a way that :

$$
\begin{aligned}
& 2 A+3 B+4 C=13 \\
& 3 A-4 B+5 C=9 \\
& 6 A+2 B-3 C=2
\end{aligned}
$$

Determine the magnitude of the forces $\mathrm{A}, \mathrm{B}$ and C .
(10 marks)
