Department of Pure and Applied Sciences

BACHELOR OF TECHNOLOGY IN MICROBIOLOGY (BTMB16S) &  
BACHELOR OF SCIENCE IN MOLECULAR BIOLOGY AND FORENSIC  
TECHNOLOGY (BSMF16S)

**ACH 4109: FUNDAMENTALS OF PHYSICAL CHEMISTRY**

*(PAPER 2)*

SEMESTER EXAMINATION

SEPT. 2017

**TIME: 2 HOURS**

This paper consists of **FIVE** questions

Answer question **ONE (Compulsory)** and any other **TWO** questions

## Question one

- a) (i) Define a base according to the Brownsted-Lowry theory. **(2 marks)**
- (ii) With reasons, state whether the following solutions are acidic or basic.
- I) A solution of sodium in liquid ammonia **(1 mark)**
  - II) A solution of hydrogen chloride in liquid ammonia. **(1 mark)**
  - III) A solution of methyl benzene in water. **(1 mark)**
- b) (i) State the osmotic pressure law. **(2 marks)**
- (ii) The average osmotic pressure of human blood at 37°C is 7.6 atm.  
What will be the:
- I) Total concentration of the various solutes in blood? **(2 marks)**
  - II) Freezing point of blood if the molarity is taken to be equal to molality?  
( $k_f = 1.86 \text{ K/mol.kg}$ ,  $R = 0.0821 \text{ L.atm./Kmol}$ ). **(3 marks)**
- c) A sample of a gas occupies  $300 \text{ dm}^3$  at 27°C and 750 Torr pressure. Calculate the:

(i) Contraction in volume when the gas is cooled to  $-33\text{ }^{\circ}\text{C}$  at 750 Torr pressure.

**(3 marks)**

(ii) Change in volume when the pressure is reduced by 150 Torr at the same temperature.

**(3 marks)**

d) At temperatures above its boiling point, dinitrogen tetroxide exists in equilibrium with nitrogen dioxide as shown:

Derive an expression relating  $k_p$  and  $k_c$  for this reaction.

**(4 marks)**

e) (i) State qualitatively, the pH of  $\text{CH}_3\text{COONa}$ .

**(1 mark)**

(ii) Give a reason for the answer in (i) above.

**(1 mark)**

(iii) Calculate the pH of 0.15 M  $\text{CH}_3\text{COONa}$  ( $K_a = 1.8 \times 10^{-5}$ ,  $K_b = 5.56 \times 10^{-10}$ )

**(2 marks)**

f) The density of an unknown gas is  $1.23 \text{ gL}^{-1}$  at S.T.P. Calculate its molecular mass ( $R = 0.082057 \text{ L.atm.K}^{-1}\text{mol}^{-1}$ ).

**(4 marks)**

## Question Two

a) Define buffer capacity.

**(2 marks)**

b) Give an example of a buffer solution with:

(i) A pH less than 7

**(1 mark)**

(ii) A pH greater than 7

**(1 mark)**

c) Describe how the buffer capacity of a buffer is determined.

**(7 marks)**

d) Calculate the pH of a buffer solution containing 0.04 M  $\text{Na}_2\text{HPO}_4$  and 0.08 M  $\text{KH}_2\text{PO}_4$  at  $25\text{ }^{\circ}\text{C}$ .

**(4 marks)**

e) Estimate the volume of 0.1 M HCl that may be added to  $25 \text{ cm}^3$  of the phosphate buffer in (d) above before it stops acting as a buffer.

**(5 marks)**

### Question Three

- a) (i) Define the term “colligative property of matter”. **(2 marks)**  
(ii) List the colligative properties of matter. **(4 marks)**
- b) Differentiate between molarity and molality of a solution as used in concentration measurements. **(4 marks)**
- c) The addition of 0.24 g of sulphur to 100 g carbon tetrachloride lowered its freezing point by 0.28 K. Determine the molecular formula of sulphur. (S = 32). The molal freezing point depression constant is 29.8 K **(10 marks)**

### Question Four

- a) (i) Define the term reaction quotient as used in chemical equilibria. **(2 marks)**  
(ii) Explain the importance of the reaction quotient. **(4 marks)**
- b)  $K_c$  for the reaction given below is 69 at 500°C.

Analysis of a 10 litre container of the equilibrium mixture at 500°C revealed the presence of 4.0 moles of  $H_2$  and 5.0 moles of  $NH_3$ .

- (i) Calculate the number of moles of  $N_2$  in the container. **(4 marks)**  
(ii) Calculate  $K_p$  for the reaction mixture. **(3 marks)**
- c)  $K_c$  for the reaction given below is 9.00 at 973K.

If 1.00 mole of  $SO_3$  and 1 mole of  $NO$  are injected into a 1.00 litre flask at 973K:

- (i) Predict the direction in which the reaction would proceed. **(2 marks)**  
(ii) Determine the concentration of all the species in the equilibrium mixture. **(5 marks)**

### Question Five

- a) State Boyle’s law. **(1 mark)**

- b) State the application of Boyle's law. **(2 marks)**
- c) The table below shows the variation of pressure with volume for one mole of ammonia gas at 0°C.

<b>Experiment</b>	<b>P (atm)</b>	<b>Volume, V, (Litres)</b>
1	0.1300	172.10
2	0.2500	89.28
3	0.3000	74.35
4	0.5000	44.49
5	0.7500	29.55
6	1.000	22.08

- (i) Plot a graph of P against  $\frac{1}{V}$ . **(12 marks)**

- (ii) Use the graph to determine the value of the gas constant R and give its units.

**(5 marks)**
