# FACULTY OF APPLIED AND HEALTH SCIENCES

### DEPARTMENT OF PURE & APPLIED SCIENCES

# **UNIVERSITY EXAMINATION FOR:**

# BACHELOR TECHNOLOGY IN INDUSTRIAL MICROBIOLOGY AND

# BIOTECHNOLOGY

# AAB 4302: BIOSTATISTICS & EXPERIMENTAL DESIGNS REGULAR PAPER

### SPECIAL/SUPPLEMENTARY EXAMINATION

# **SERIES:** SEPTEMBER 2018

### TIME:2HOURS

### DATE:Pick DateSep2018

### **Instructions to Candidates**

You should have the following for this examination *-Answer Booklet, examination pass and student ID* This paper consists of **FIVE** questions. Attemptquestion ONE (Compulsory) and any other TWO questions. **Do not write on the question paper.** 

#### **Question ONE**

(a) A set of 100 pods, each containing 4 peas, was examined to see how many of the peas were good. The following were the results.

No. of good peas in pod	0	1	2	3	4	
No. of pods (f)	7	20	35	30	8	
Find the (i) Mean						(3 marks)
(ii) Median						(3 marks)
(iii) Mode						(2 marks)
(iv) Comme	nt on	the dis	tributi	on of t	he frequency	(2 marks)

(b) The number of organic particles suspended in a volume V  $cm^3$  of a certain liquid follows a poisson distribution with mean 0.1 V.

Find the probability that a sample of V=1 cm<sup>3</sup> of the liquid will contain

(i) at least one organic particle	(3 marks)
(ii) exactly one organic particle	(3 marks)

(c) The number of times Y an adult human breathes per minute is approximately normal with mean equal to 16 and standard deviation equal to 4. If a person is selected at random and the number of Y breathes per minute while at rest is recorded, what is the probability that Y will

(i)	exceed 22	(3 marks)
(ii)	between 12 and 24	(3 marks)
(iii)	almost 21	(3 marks)

(d) Twenty randomly selected maize farms yielded a mean of 15 bags per acre. Assuming that the yield per acre is normally distributed with a variance of 150, construct a 95% confidence interval estimate for the true mean yield per acre. (5 marks)

#### **Question TWO**

(a) In a fishing competition, the total catches of 40 anglers has masses (kg) as given below

Mass (kg)	0.3- 0.7	0.8- 1.2	1.3- 1.7	1.8-2.2	2.3-2.7		
Frequency	8	12	8	8	4		
(i) Draw a hist	ogram of th	ese data.					(2 marks)
(ii) Obtain the	mean and r	nedian. Wh	ich will yo	u consider	to be more appr	opriate and why.	(4 marks)

(iii) Calculate the standard deviation of the distribution (4 marks)

(b) In order to determine whether or not a particular heat treatment is effective in reducing the number of bacteria in skim milk. Observation were made before and after treatment on twelve samples of skim milk. Te results are recorded below in logarithms of direct microscopic counts.

Sample	Before Treatment	After Treatment
1	6.98	6.95
2	7.08	6.94
3	8.34	7.17
4	5.30	5.15
5	6.26	6.28
6	6.77	6.81
7	7.03	6.59
8	5.56	5.34
9	5.97	5.98
10	6.64	6.51
11	7.03	6.84
12	7.69	6.99

(i) State the null and alternative hypothesis.	(2 marks)

(iii) Distinguish between situation requiring a two-sample t-test and a paired sample t-test. (3 marks)

### **Question THREE**

(ii) Test the hypothesis in (i). Use  $\alpha = 0.05$ .

(a) In order to taste two tooth pastes, a sample of 4 pairs of brothers from 4 different families were picked from a large number of potential families. One brother used crest. The other brother used colgate. The decay level was measured by a dentist after a year. Result were:

	Family 1	Family 2	Family 3	Family 4	
Crest	1.3	1.0	1.2	0.9	
Colgate	0.8	1.0	0.7	0.7	

Test at  $\alpha$ = 0.05 the claim by colgate that their decay level was lower

(i) Compute the test statistics	(4 marks)
(ii) Give the degree of freedom	(3 marks)
(iii) Do you reject Ho or fail to reject Ho, and give conclusion.	(2 mark)

(b) A student titres 10ml of 0.1M acid against 0.1 M alkali five times and obtains the following results for the volume of alkali: 9.88, 10.18, 10.23, 10.39, 10.25 ml.

(5 marks)

### **Question FOUR**

(a) Some varieties of nematodes, round worms that live in the soil feed upon the roots of lawn grass and other plants. This pest, which is particularly troublesome in warm climates, can be treated by the application of nematodes. Data collected on the pecent kil of nematodes for various rates of application (pounds per acre) are as follows:

	Rate of application, $x$	2	2	2	3	3	3	4	4	4	5	5	5
	Percent kill, y	50	56	48	63	69	71	86	82	76	94	99	97
(	) Calculate the coefficient of	correla	ation, r l	betwee	n rates	of app	licatio	n ( <i>x</i> )	and pe	ercent	kill (y)	. (6 m	arks)
(	i) Do the data provide eviden	ce to i	ndicate	a linea	r correl	ation b	oetwee	n y on	<i>x</i> . (α=	0.05)	)	(4 n	narks)
(	ii) Fit a simple linear regressi	on for	the data	a.								(3 n	narks)
(	v) Give a 95% confidence int	erval f	for β. (E	o not o	calculat	te the C	C.I)					(2 n	narks)
(b)	Briefly explain the importanc	e of ra	ndomiz	ation a	nd repl	ication	in des	sign of	exper	iments	. (	5 mar	ks)

### **Question FIVE**

(a) A clinical trial was carried out to investigate whether there is any evidence of a difference in the effects of melatonin drug and the placebo. 10 patients were observed for one night with the drug and one night with the placebo. The hours of sleep on each are shown in the table below

Patient	Hours of	f Sleep
	Drug	Placebo
1	5.2	5.9
2	7.0	7.9
3	8.2	3.9
4	6.6	4.7
5	5.5	5.3
6	7.4	5.4
7	5.3	5.5
8	6.7	6.1
9	7.4	3.8
10	5.8	6.3

(i) Write down the null and alternative hypothesis for this trial.

(ii) Use an appropriate test statistic to test the hypothesis in (a). (Use  $\alpha = 0.05$ )

(2 marks)

(7 marks)

(iv) What conclusions do you draw from these data.

(b) A company wishes to examine whether there is an association between accident proneness and colour blindness. The results for a group of 80 drivers are as given below

		Cole	our blindness
Accidents during last		NO	YES
five years	None	22	5
	One or more	38	15

Is there any evidence of an association between colour blindness and accident proneness? (Use  $\alpha = 0.05$ )

(5 marks)
