

# THE MOMBASA POLYTECHNIC UNIVERSITY COLLEGE

(A Constituent College of JKUAT)  
*Faculty of Engineering and Technology*

DEPARTMENT OF BUILDING AND CIVIL ENGINEERING  
**HIGHER DIPLOMA IN BUILDING & CIVIL ENGINEERING**

EBC 3221: HYDROLOGY  
**END OF SEMESTER EXAMINATION**  
SERIES: DECEMBER 2011

**TIME: 2 HOURS**

## **Instructions to Candidates:**

You should have the following for this examination

- *Answer booklet*
- *Calculator*

This paper consists of **FIVE** questions in two sections **A & B**  
Answer question **ONE (COMPULSORY)** and any other **TWO** questions.  
Maximum marks for each part of a question are clearly shown  
This paper consists of **THREE** printed pages

## **SECTION A (COMPULSORY)**

### **Question 1**

- a) Explain the role of various factors that influence evaporation from a water body and soil surface and transpiration from plants (26 marks)
- b) State the general equation for total evaporation and explain the terms (4 marks)

## **SECTION B (Answer any TWO questions from this section)**

### **Question 2**

- a) State the Darcy's equation and explain the terms (5 marks)
- b) State the importance of the extension of Darcy's Law to ground water flow (5 marks)

Figure 1

For the arrangement above;

- (i) Calculate the velocity (5 marks)
- (ii) Calculate the Discharge (3 marks)
- (iii) Calculate Transmissivity (2 marks)

### Question3

- a) Define the Instantaneous Unit Hydrograph: (6 marks)
- b) Define the Unit Hydrograph (5 marks)
- c) State the general equation for the unit hydrograph and explain (3 marks)
- d) Outline **THREE** assumptions that give the unit Hydrograph simple properties assisting in its application (6 marks)

### Question 4

- a) A well of radius 0.5m completely penetrates an unconfined aquifer with  $K = 30\text{m/day}$  and  $H = 50\text{m}$ . The well is pumped so that the water level in the well remains at 40m above the bottom.

Assuming that pumping has essentially no effect on water table height at  $r = 500\text{m}$  and that well losses are zero. Calculate the steady state well discharge (10 marks)

- b) Using the Gumbel approach with  $\bar{x} = 700$

$$\frac{\bar{x}}{x} = 288, T = 113.3$$

- (i) Calculate the theoretical recurrence interval for a flood flow 700,000 cfs (8 marks)
- (ii) Calculate the probability P (2 marks)

### Question 5

- a) State the commonly accepted measures for reducing flood damage (10 marks)
- b) Explain the catchment response to a storm (10 marks)
