## DEPARTMENT OF BUILDING AND CIVIL ENGINEERING

# **DIPLOMA IN BUILDING & CIVIL ENGINEERING**

## DIPLOMA IN CIVIL ENGINEERING & CAD

EBC 2322: ESTIMATING & COSTING

### END OF SEMESTER EXAMINATION

SERIES: DECEMBER 2011

TIME: 2 HOURS

### Instructions to Candidates:

You should have the following for this examination

• Answer Booklet

This paper consists of FIVE questions

Answer question **ONE (COMPULSORY)** from **SECTION A** and any other **TWO** questions from **SECTION B** Maximum marks for each part of a question are clearly shown This paper consists of **THREE** printed pages

#### SECTION A (COMPULSORY)

#### Question 1 (20 marks)

- a) (i) State **FIVE** factors that affect the operating costs of mechanical plant  $(2 \frac{1}{2} \text{ marks})$ 
  - (ii) Using hypothetical example price the following item. Allow for disposal of general surface water (item)
    (7 <sup>1</sup>/<sub>2</sub> marks)
- b) Briefly explain the following methods of approximate estimating giving **TWO** merits and **TWO** demerits of each method
  - (i) Functional unit valuation method
  - (ii) Cubic capacity method
- c) A proposed storey building has two basement floors size 20 x 20 x 4m and three upper floors size 15 x 15 x 3m. Calculate the approximate cost of this building using the storey enclosure method given that the unit cost is kshs. 6000.00 per m<sup>2</sup>.

#### SECTION B (Answer any TWO questions from this section)

#### Question 2 (20 marks)

Using the data given, build up a unit rate for vibrated reinforced concrete (1:2:4) in ground beams (per m<sup>3</sup>)

#### Data

| Cost of cement                                     | – kshs. 700/- per 50kg bag                  |  |  |
|--|---|--|--|
| Cost of sand                                       | - kshs 2000/- per tonne                     |  |  |
| Cost of ballast                                    | - kshs 3000/- per tonne                     |  |  |
| Density of cement                                  | $-1440 \text{kg/m}^3$                       |  |  |
| Density of sand                                    | $- 1600 \text{kg/m}^3$                      |  |  |
| Density of ballast                                 | $-1700 \text{kg/m}^3$                       |  |  |
| Purchase price of 300 litre mixer – kshs 250,000/= |   |  |  |
| Interest on capital                                | - 15%                                       |  |  |
| Hours worked in a year                             | - 1600 hours                                |  |  |
| Maintenance and repairs                            | -70% of the annual depreciation             |  |  |
| Fuel consumption                                   | -3 litres per hour at kshs 110/= per litres |  |  |
| Skilled labour                                     | - kshs 100/= per hour                       |  |  |
| Unskilled labour                                   | - kshs 5-/= per hour                        |  |  |
| Mixing time  | – 4 minutes per cycle                       |  |  |
| Efficiency   | - 56 minutes per hour                       |  |  |
| Assume any other necessary information not given   |   |  |  |

(10 marks)

#### Question 3 (20 marks)

- a) Briefly describe the following terms
  - (i) Labour constants
  - (ii) Pro-rata rates
  - (iii) Preliminary items

b) Using the data given build up a unit rate for 265 x 165 x 15mm clay tiles laid on 50 x 25mm sown softwood battens and nailed at every fourth couse with 32mm long mild steel nails (per m<sup>2</sup>)

(15 <sup>1</sup>/<sub>2</sub> marks)

 $(4 \frac{1}{2} \text{ marks})$ 

| Data                                   |   |                     |
|--|---|---------------------|
| Cost of tiles                          | - | kshs 70/- per piece |
| Cost of 50 x 25mm sown softwood        | - | ksh 40/= per m      |
| Cost of 32mm long mild steel nails     | - | kshs 80/= per kg    |
| Unskilled labour                       | — | kshs 50/= per hour  |
| Assume any other necessary information |   |                     |

#### Question 4 (20 marks)

Using the data given build up a unit rate for making and fixing in position a softwood framed, ledged, braced and battened door size 800 x 2100 x 50mm consisting of 100 x 50mm stiles and top rail, 225 x 32mm middle and bottom rail, 100 x 32mm braces, 75 x 18mm T and G battens (per  $m^2$ )

(20 marks)

#### Data

| Dutu  |   |                                |  |  |  |
|---|---|--------------------------------|--|--|--|
| Cost of sown softwood                               | - | kshs 8000/- per m <sup>3</sup> |  |  |  |
| Cost of wood glue                                   | - | kshs 200/= per kg              |  |  |  |
| Cost of sand paper                                  | - | ksh 10/- per piece             |  |  |  |
| Cost of wedges                                      | - | kshs 2/= each                  |  |  |  |
| Cost of plaining                                    | - | kshs 10/= per m for all sizes  |  |  |  |
| Costs of materials are inclusive of transport costs |   |                                |  |  |  |
| Skilled labour                                      | - | shs 100/= per hour             |  |  |  |
| Unskilled labour                                    | - | shs 50/- per hour              |  |  |  |
| Assume any other necessary information              |   |                                |  |  |  |
|   |   |                                |  |  |  |

#### Question 5 (20 marks)

Using the data given, build up a unit rate for the following item, cart away deposit spread and level'(per m<sup>3</sup>) (20 marks)

#### Data

| Dutu  |   |  |
|---|---|--|
| Purchase price for 12 tonne tipper          | - | kshs 10,000,000/-                          |
| Resole value after 5 years                  | - | kshs 2,000,000/-                           |
| Interest on capital                         | - | 10% per annum (year)                       |
| Maintenance, repairs and insurance          | _ | 70% of the annual depreciation             |
| Fuel consumption                            | _ | 10 litres per hour at kshs 110/- per litre |
| Hours worked in a year                      | - | 1500 hours                                 |
| Hire rate for grader                        | - | kshs 200,000/= including the operator      |
| Tyres changed twice per year for the tipper |   |  |
|   |   |  |

| Cost of one tyre of tipper                       | - | shs 60,000/- each          |  |  |
|--|---|----------------------------|--|--|
| Volume deposited                                 | - | 50,000m <sup>3</sup>       |  |  |
| Capacity of tipper                               | - | 15m3 per trip              |  |  |
| Tipping fee                                      | - | shs 5/- per m <sup>3</sup> |  |  |
| Distance to tip                                  | - | 10 km                      |  |  |
| Speed when tipper is fully loaded                | - | 20 km/hour                 |  |  |
| Speed when tipper is empty                       | - | 40km/hour                  |  |  |
| Skilled labour                                   | - | kshs 100/- per hour        |  |  |
| Unskilled labour                                 | - | kshs 50/= per hour         |  |  |
| Assume any other necessary information not given |   |                            |  |  |
